

UNIVERSITY OF NAIROBI
DEPARTMENT OF COMPUTING AND INFORMATICS
SCS3202: ASSEMBLY LANGUAGE PROGRAMMING
Continuous Assessment Test

Date: 23rd May, 2024

Time: 1 hr

Instruction: All the questions

Question 1 (10 Marks)

- A) The processor used to execute floating point instruction is referred to as [2 marks]
 - B) The registers in this processors are how many bytes long? [2 marks]
 - C) Differentiate between the EBP and ESP registers [2 marks]
 - D) Given the instruction below, what kind of addressing is being used? [2 marks]
mov [x+2], word 25
 - E) Given the instruction below what is its effect? [2 marks]
faddp
-

Question 2 (10 Marks)

Write an assembly program that has the following features

- i. An array of five integers defined in the data section
 - ii. A loop that adds the five values in the array
 - iii. Outputs the results of the addition using *printf*
-

Question 3 (10 Marks)

A) Write an assembly that has the following features

- i. Asks the user to enter their first name and surname
- ii. The program then outputs the longer of the two names

You can use macros (not c functions in answering this question)
