

Dear Pentapath Group Hiring Team,

I am writing to express my strong interest in the Software Development Intern/Attachee position at Pentapath Group Limited. As a second-year Bachelor of Science in Computer Science student at the University of Nairobi, I am actively building scalable web applications and backend systems, and I am eager to bring my hands-on technical experience to your RFID and IoT development team.

Your requirement for developers who can handle both frontend visualization and backend API integration aligns perfectly with my current development stack. I have strong proficiency in JavaScript, HTML5, CSS3, and React.js, which I recently used to build dynamic frontend components and user dashboards for a Project Allocation and Supervision System (PASS). On the backend, I am experienced in architecting RESTful APIs and managing databases using Python (Flask), PostgreSQL, and SQLite.

Particularly relevant to Pentapath's focus on real-time tracking and automation is my work on *ParcelPoa*, an online delivery system. For this project, I collaborated with a team to integrate real-time parcel tracking via WebSocket connections and backend RESTful APIs. This experience in handling asynchronous, real-time data flow translates directly to the challenges of RFID hardware integration and system monitoring you are tackling.

I am highly adaptable, comfortable working with Git/GitFlow in team environments, and possess a strong willingness to learn and troubleshoot in a fast-paced setting. I have attached my CV, which provides further details on my database modeling, API development, and UI/UX implementation.

Thank you for your time and consideration. I look forward to the possibility of contributing to Pentapath's innovative enterprise solutions.

Sincerely,

Simon Mwaura
